Make Your Access Controls Airtight with Continuous

Manual permission changes and after-the-fact audits can't keep up with today's pace — and they leave security gaps that put your institution at risk.

Automate and orchestrate identity and access management across every system with automation that scales with you.

Achieve secure, compliant access — no spreadsheets required

IT and security teams are facing pressure from every side. Unburden your staff, reduce audit risk, and prevent permission sprawl with automation that handles the heavy lifting:

EMPLOYEE ONBOARDING & OFFBOARDING

Provision or revoke access in minutes — not days.
Automatically assign permissions for new hires or remove all access for terminated employees across every connected system.

ROLE CHANGES & INTERNAL MOBILITY

Update access instantly when responsibilities shift.
Automated workflows reassign permissions based on role templates to enforce least privilege without slowing down productivity.

AUDIT-READY ACCESS RECORDS

Prove compliance without the scramble.
Full audit trails capture every request, approval, and change — keep you ready for any testing.

ACCESS ANOMALY DETECTION

Stop stale or excessive permissions before they cause risk.
Automated reviews and alerts catch orphaned accounts, excessive entitlements, or violations of policy.

CROSS-SYSTEM INTEGRATION

Manage access everywhere from one place.
With 300+ pre-built connectors, Continuous integrates with Active Directory, core banking platforms, HRIS, SaaS apps, and more — without custom code.

Let IT and security do what they do best — automate the rest

With identity and access management automated, you'll have peace of mind knowing:

- ✓ Access changes complete in under 5 minutes
- ✓ Every request, approval, and change are logged automatically
- ✓ Terminated users lose access immediately

- ✓ SLA compliance is in place for onboarding and offboarding cycles
- ✓ Orphaned or stale permissions are eliminated
- ✓ Cross-system integration without IT bottlenecks

Scale securely, stay compliant

With robust role-based access controls, embedded regulatory logic, and real-time monitoring, Continuous for identity and access management is your safeguard — not another source of stress.

From Symitar and SilverLake to Active Directory and HRIS systems, we connect the dots, so your access management stays secure, compliant, and efficient.

Trusted by 1,600+ financial institutions

"Before Continuous, we didn't have an efficient process to review all of our critical systems in a single platform. Now, it greatly reduces the amount of time it take us to do a review. This platform is designed for the financial institution."

—Ryan Goellner, Vice President IT Manager, Gate City Bank
